

Caribbean Men Speak About The Krongrad Institute

“Prostate cancer is the most common cancer of Caribbean men. I knew I was at risk and I got myself tested early. After I was diagnosed, I had laparoscopic prostatectomy with Dr. Krongrad and now I am cancer free. I told everyone in Parliament: prostate cancer can be beaten.”

**The Honorable Wilmoth Daniel
Deputy Prime Minister, Antigua**

“We were diagnosed with prostate cancer at the same time. We had our prostates removed on the same day. We lost no blood, took nothing for pain, and at 5 in the afternoon we got up and greeted Dr. Krongrad, the man who saved our lives. We recommended the Krongrad Institute to our Health Minister.”

**Gene and Milton Creque
British Virgin Islands**

“The laparoscopic procedure is a Seven Day Wonder. You go in one day, come out the next. Seven days later the skin is healed, the catheter is out and you move on with your life. I was cared for very well at every step of my journey. It’s like nothing happened.”

**Wilfred James
Jamaica**
